Witte Technology GmbH: Your qualified partner for innovative solutions in the Defense area

Quality, safety, individuality, and strong partnerships

Witte Technology supplies **vehicle safety products**, high-performance **warning markings**, and **pipeline markings** for the defense area, including directly to the Navy, the German Armed Forces, the US Army, and relevant companies in the sector.

Our solutions are designed for demanding operating conditions: high visibility and legibility, reliable retroreflection, resistance to abrasion, UV radiation, chemicals, salt spray, and extreme temperature changes.

As a DLA-listed partner, we offer a wide range of **NSN** (NATO Stock Number) listed items assigned to our **CAGE** codes **D1528** or **C6208**, thus ensuring standardization, interoperability, and traceability.

In addition to a wide range of stock items, we can also produce **customer-specific** variants (formats, materials, color codes, markings) with documented quality and project-specific design on request.

We also manufacture printed electronics that can also be used in the defense area. These include **multimodal sensors** (pressure/humidity/temperature), flexible **heating elements**, and **printed antennas** (RFID, NFC, UHF). The exact fields of application can be specified on request and implemented on a project-specific basis.

Possible applications and areas of use for Witte Technology GmbH products:
- Vehicles
- Ships
- Infrastructure
- Devices
- Equipment
- Defense area
